Abstract.

In Fig.2 of this paper, the assignment of the handedness of the structures shown in the right column was interchanged for the configurations β and δ . In the figure shown below this error has been corrected. To simplify comparison with Fig. 3 of this paper, we now show in the left column the forms, α' , β' , γ' and δ' , with the polarization vectors, \mathbf{m} , pointing into the drawing plane.

We also note that the second last paragraph of the left column on p.349 should read: ...namely left-handed (β, γ) and right-handed (α, δ) versions, as sketched in Figure 2.

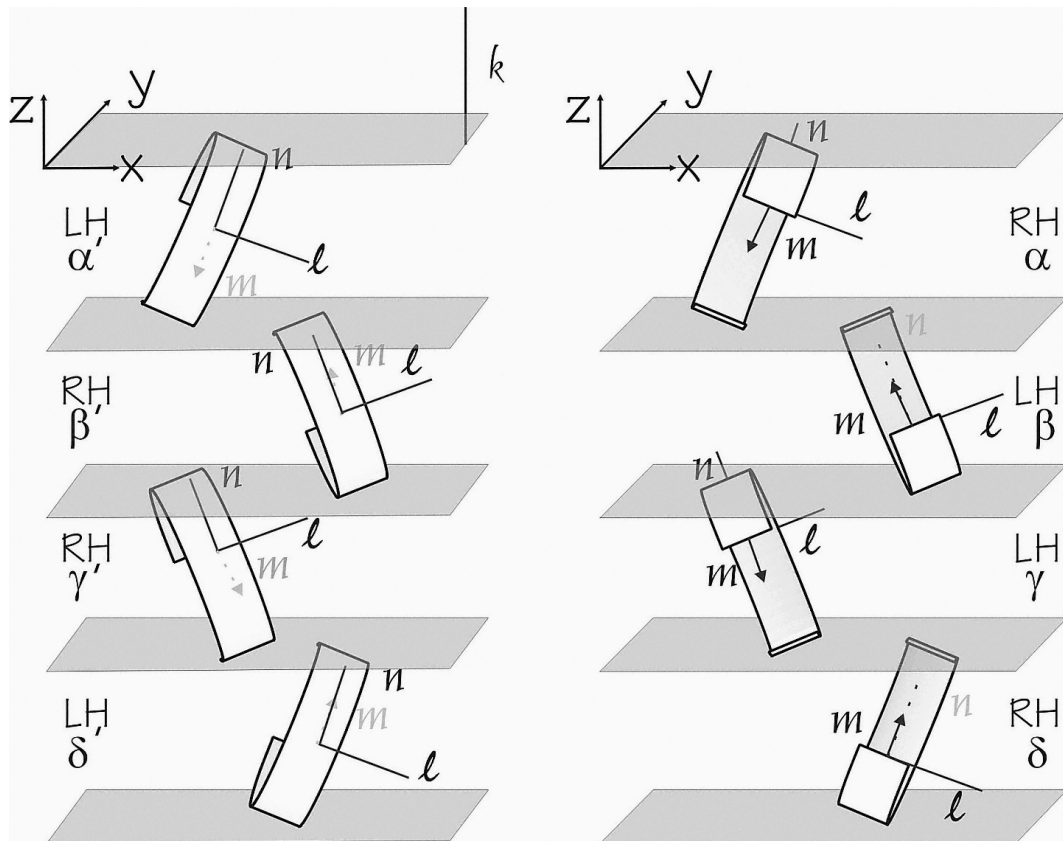

Fig. 2. Revised Fig. 2 of the right-handed ($\alpha, \delta, \beta', \gamma'$) and left-handed ($\beta, \gamma, \alpha', \delta'$) versions of smectic C_G .
